Payroll & Bookkeeping

Matt Portt

Managing Director
Portt Payroll & Bookkeeping

Great businesses are built on great systems.

Using pensionsync & IRIS Payroll Professional, we can grow quickly without compromising quality & accuracy.

"We are a young, agile, fast growing business. In the two years since we started, we have grown into a team of five, offering a personal service to our clients who range from 1 to 200 employees.

We offer our clients a range of providers within our standard AE set up and ongoing pricing model: Legal & General, Nest, NOW: Pensions, Smart Pension & The People's Pension.

We do support the use of other providers, but depending on how manual these are, we apply additional fees for doing so.

Because we believe choice is important & accept that not all of our clients can afford financial advice, we have produced a simple summary document, comparing the different providers.

We use IRIS Payroll Professional as our payroll software. To keep our pricing low it is critical that our software can handle different solutions with high accuracy rates. For us IRIS has been an excellent choice in developing the required processes & automation to cope with auto enrolment.

For us, payroll is Auto Enrolment and Auto Enrolment is payroll therefore our prices are all shown as one combined fixed monthly fee.

We knew that data transfer between payroll & pensions would have to be automated for AE; so we took an early decision to price AE inclusively.

With pensionsync, each data submission is 5 to 10 times quicker than producing & uploading a manual CSV file, so we reduce our costs.

We love having one uniform interface/process to set up a scheme. pensionsync does the rest for us. Having 5 different processes & websites to enter data is cumbersome & time consuming.

Since using pensionsync, we have been able to reduce the setup fee from £250 to £99: scheme set up is simple, uniform & automated. Perfect.

I don't think it's an understatement to say that Auto Enrolment could be an admin disaster without this technology.
